UC_01: Create account

Field	Description
UC Name	Create account
Dependency	None
Actors	Guest, Potential User
Preconditions	User is not currently logged in; User has a valid email address.
Description of Main Sequence	1. User navigates to registration page 2. User enters personal details (name, email, password) 3. System validates input data 4. System checks if email already exists 5. System creates user account 6. System confirms successful registration
Description of Alternative Sequence	**1. Invalid data format:** a. System displays error message (e.g., "Invalid email format" or "Password too weak"). b. User corrects the fields and resubmits. **2. Email already exists:** a. System notifies user that the email is already registered. b. System suggests "Forgot Password" or "Login" options. **3. Database Connection Failure:** a. System displays a "Try again later" message.
Non-functional requirements	1. Registration process should complete within 3 seconds. 2. **Passwords must be stored in encrypted format** (to match the security level of the Login UC). 3. System must use HTTPS to secure data transmission. 4. Password must meet complexity requirements (e.g., min. 8 characters).
Postconditions	1. New user account is stored in the database. 2. User is redirected to the login page or a welcome dashboard. 3. System triggers a confirmation email to the user.
