Field	Description
UC Name	Create business account
Dependency	None
Actors	Business client
Preconditions	1. User is not currently logged in. 2. User has a valid company email address. 3. User has a valid company tax number.
Description of Main Sequence	1. User navigates to the business registration page. 2. User enters personal details, company email, and company tax number. 3. System validates the input data format. 4. System checks if the email or company tax number already exists in the database. 5. System creates the business user account. 6. System confirms successful registration.
Description of Alternative Sequence	**1. Invalid data format:** a. System displays an error message (e.g., "Invalid email format" or "Invalid tax number format"). b. User corrects the fields and resubmits. **2. Email or Tax Number already exists:** a. System notifies the user that the email or company is already registered. b. System suggests "Login" or contact support options. **3. Database Connection Failure:** a. System displays a "Try again later" message.
Non-functional requirements	1. Registration process should complete within 3 seconds. 2. Passwords must be stored in encrypted format. 3. System must use HTTPS to secure data transmission. 4. Password must meet complexity requirements (e.g., min. 8 characters).
Postconditions	1. New business account is stored in the database.

	2. User is redirected to a welcome dashboard or login page. 3. System triggers a confirmation email to the user.

Field	Description
UC Name	Verify business account
Dependency	US_24
Actors	Admin
Preconditions	1. Business client has submitted registration details. 2. Admin is logged into the system.
Description of Main Sequence	1. Admin accesses the list of pending business accounts. 2. Admin reviews the company tax number and provided documentation. 3. Admin verifies the validity of the business credentials. 4. System updates the account status to "Verified". 5. System enables B2B access for the account. 6. System notifies the business client of the successful verification.
Description of Alternative Sequence	1. **Invalid Credentials:** a. Admin rejects the verification request. b. System notifies the user of the rejection reason. 2. **Missing Information:** a. Admin requests additional documentation. b. Business client provides necessary details.
Non-functional requirements	1. Verification status change should be processed within 3 seconds. 2. Admin actions must be logged for security purposes. 3. Document access must be restricted to authorized personnel.
Postconditions	1. Account is verified and granted B2B access. 2. A confirmation notification is sent to the business client.

UC_24: Create business account

UC_25: Verify business account

UC_26: View B2B offers

Field	Description
UC Name	View B2B offers
Dependency	US_25 (Verify business account)
Actors	Business client
Preconditions	1. User is logged into a verified business account. 2. Account has been granted B2B access privileges.
Description of Main Sequence	1. User navigates to the "B2B Offers" or "Special Packages" section. 2. System retrieves exclusive travel packages designated for business clients. 3. System displays the list of B2B offers with special pricing and availability. 4. User browses or selects a specific offer to view detailed information.
Description of Alternative Sequence	1. **No B2B offers available:** a. System displays a message indicating that no exclusive offers are currently active. 2. **Account not verified:** a. System restricts access and prompts the user to complete verification (US_25).
Non-functional requirements	1. Results should load in under 2 seconds to ensure high performance.

	2. Special B2B pricing must remain hidden from standard "Traveler" accounts. 3. The system must use HTTPS to protect business transaction data.
Postconditions	1. Business client is viewing available B2B packages. 2. User can proceed to filter or book a specific B2B trip.

UC_27: Filter B2B packages

Field	Description
UC Name	Filter B2B packages
Dependency	US_26 (View B2B offers)
Actors	Business client
Preconditions	1. User is currently viewing the B2B offers page (US_26). 2. User is logged into a verified business account.
Description of Main Sequence	1. User selects filtering criteria such as price range or availability dates. 2. User applies the selected filters. 3. System processes the criteria against the available B2B database. 4. System refreshes the display to show only packages matching the criteria. 5. User views the refined list of B2B travel packages.
Description of Alternative Sequence	**1. No results match filters:** a. System displays a message: "No packages found matching your criteria." b. System suggests resetting filters or broadening search parameters. **2. Invalid input:** a. System identifies logical errors (e.g., "Start Date" is after "End Date"). b. System displays an inline error message and prevents the filter update.
Non-functional requirements	1. Filtered results must be updated and displayed within 2 seconds. 2. Filter settings should persist if the user navigates to a package detail and returns. 3. The interface must remain responsive during the filtering process.
Postconditions	1. The list of B2B packages is filtered according to user preferences. 2. The applied filter criteria are visible to the user for easy modification.
